

1    **ABSTRACT OF THE DISCLOSURE**

2           A trigger assembly has a housing, a trigger, an actuating lever, a string  
3 holder, a bowstring catch biasing member, a safety pin, a safety lock, a pushing  
4 arm, a block, a block biasing member and a string stop. The housing has a mouth.  
5 The actuating lever has a hook and abuts against the top of the trigger. The  
6 bowstring catch has a string hook and a leg selectively engaging the hook on the  
7 actuating lever. The safety pin is moveably mounted in the housing and is  
8 supported on the actuating lever. The safety lock is moveably mounted in the  
9 housing and has a push rod. The pushing arm has a protrusion abutting the push  
10 rod. The block has a transverse rod selectively engaging the front end of the  
11 pushing arm. Accordingly, a trigger assembly with two safety features is  
12 provided.
